

## When fitting cages into a room is important to get maximum use of the space.

Generally, in the room, there will be a change station, a sink, a work bench and a work trolley for clean and or dirty cages.

Some of these items may be shared with other rooms but clearly the work area must be safe and with all components accessible.

Airlaw has the resources to optimize a room layout. All that is required is a drawing with dimensions and we can do the rest. Shown is typical of what Airlaw provides . It can be seen that the Airlaw racks vary in size to suit the room and the Library drive increases the room capacity compared with alternative rack systems.
