STANDARD RACK AND NEW RACK WITH AIR HANDLER IN 2019

The Rat Rack

THE AIRLAW STORY FROM 1994 TO 2019.

Airlaw, at the request of a major University, designed and built the first Australian filter top micro-isolator. By using a high performance polymer, we were able to match the durability and toughness of imported products at half the cost. The next step was the IVC and, being polymer specialists, we chose to make an all polymer modular Rack. We were assisted and guided in the specific cage requirements by Dr. Catheryn O'Brien, Dr. Julie Fergusson, and Dr. Malcolm France and various Australian state protocols. We now have installed more than 42,000 cages in Australasia. Throughout this development we have kept the same cage but constantly improved the Racking system. Our latest product range uses common components which are designed for simple assembly, compact transport and easy maintenance. We believe we have:

The lowest cost to install-The lowest cost to own
